

Headstarters™

Headstarters™ are bare-root Paulownia trees with trimmed trunks. They are ready to plant in the ground and will regenerate a new trunk rapidly with warm weather and correct management.

Headstarters™ have well-developed roots systems at least 75mm (3 inches) deep. These roots have a framework of thick fleshy main roots as well as some finer feeder roots - not just a single tap root. These thick roots contain the energy the tree needs to quickly regenerate in the field.

The trunks are trimmed just above a strong node usually at about 50 to 75mm (2 to 3 inches) tall. They have many reserve buds, ready to sprout, ensuring a new trunk will develop even if some of the buds are damaged - for example by adverse weather.

HEADSTARTERS™ ARE HARDENED, TOUGH PLANTING STOCK - TREES FOR THE REAL WORLD !

TGG Headstarters™ can reach this size in just 5 months after planting!
